

Smarter Hospitals Start Here

Hospitals today face increasing demands on staff time. Nurses and medical staff are often pulled away from patient care to perform routine delivery tasks.

1/3

of nurses' time are spent on non-clinical tasks

73

tasks per hour are handled by nurses on average

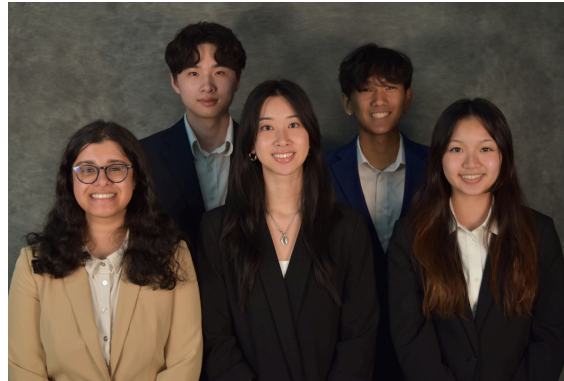

13

minutes is how long patients typically wait for a response to a call light

NurseAid changes that.

Smart care, delivered.

NurseAid

Autonomous Hospital
Delivery Robot

Giving nurses their time back, and
patients the care they deserve.

About NurseAid

NurseAid is an autonomous robot designed to help medical staff by handling low-acuity delivery tasks by transporting items like water and medications, enabling staff to focus on direct patient care.

Who We Help

Patients

Receive essential items faster, improving comfort and satisfaction

Medical Staff

Spend more time on patient care, less on logistics

Hospital Administrators

Improve efficiency while reducing staff fatigue

Families

Gain peace of mind knowing needs are met quickly

Key Features

Autonomous Navigation

LiDAR-based mapping and real-time obstacle avoidance for safe operation in hospitals

Secure Delivery Compartments

Lockable storage compartments that require authentication ensures safe transport of supplies

User Interface

Web-based interface for requesting and accepting deliveries

Optimized Design

Compact, quiet, and safe for patient environments

Technical Specifications

Mobility

Differential drive system
Autonomous mobile robot

Navigation

LiDAR-based SLAM
Real-time obstacle avoidance

Power

Rechargeable battery system

Storage

Multi-compartment system
Secure locking mechanism

Software

ROS 2-based architecture
Web-based user interface

Connectivity

Wi-Fi enabled
